AT A GLANCE

The game in five sentences

You run a ₹100 Cr equity fund at a fictional firm, Apex Capital.

The market moves only when you spend time, and every action has a price in hours or in money.

Research gives you a noisy view of each company's hidden fair value.

Four risk limits watch your book, and a team of nine reacts to your choices.

After 90 days the board judges return, risk conduct, reputation, alpha and decision quality.

SYMBOLS USED

₹1 L one lakh = ₹1,00,000

₹1 Cr one crore = ₹1,00,00,000 (100 lakh)

NAV net asset value: cash + holdings

DD drawdown: fall from peak NAV

bps basis points, 1 bp = 0.01%

The Markets page: all 20 listed stocks and 8 tickers, live.

01 THE MANDATE & THE GAME LOOP

Read, decide, spend time, live with it.

The market only moves when time moves, and time only moves when you choose. Every action either costs hours or changes your book. Everything else follows from that.

Your letter of appointment

You start as **Head of Investments** with ₹100 Cr in cash and a 90-day quarter. The board wants **+12%**, which means **₹112 Cr** by day 90, without the portfolio falling more than **10%** from its peak.

Hitting the number is not enough to be promoted. The board also scores how you got there: risk conduct, reputation, how you did against the benchmark, and whether your written theses were right.

PACE CHECK

+12% over 90 calendar days is about 64 trading sessions, or roughly **+0.18% per session** compounded. The CEO checks your pace around days 30, 60 and 85.

The mandate screen. Press START CAREER to open the terminal. Your career autosaves after every action from then on.

STARTING CAPITAL

₹100 Cr

all cash on day 1

TARGET

+12%

₹112 Cr by day 90

DRAWDOWN LIMIT

STARTING REPUTATION

60

scale 0-100; 55 needed to promote

02 ORIENTATION

Your terminal

Everything you need is on one screen. The numbered pins match the list below.

1 Career bar
Level, title, XP toward the next level and reputation (0–100). A warning badge appears here if the board has warned you.

3 Live mode, alerts, saves
Press PAUSED to switch to LIVE: the clock runs by itself at 1x, 2x or 4x. Then the bell, named saves and settings.

5 Navigation
Nine pages: Dashboard, Markets, Portfolio, Research, Trading, News, Team, Career, Performance. Badges count unread items.

7 Portfolio
Current value, progress ring to target, today's P&L, cash, invested %, and drawdown against your 10% limit.

9 Holdings
Quantity, price, value, weight, today's move and P&L for each position. Click a row to chart it.

11 Messages
Your team writes to you: macro briefs, research ideas, block offers (marked HIGH) and warnings.

13 Action bar
Every button shows exactly how much game time it costs, or where the clock will land, before you press it. Buttons that need an open market grey out after 17:00.

2 Clock
Day of week, game time, day X of 90, quarter, whether the market is open and how many hours are left in the session.

4 Ticker strip
Eight simulated tickers: BHARAT 50, DALAL 30, BHARAT BANK, BHARAT VOL, USD/INR, GOLD, US TECH 100, US 500.

6 Live chart
Hourly or daily candles with SMA 20/50, EMA 20 and Bollinger overlays. Tabs switch between the index and your holdings.

8 Upcoming
Risk alerts, live block deals and the next scheduled events with consensus vs. your economist's forecast.

10 News & events
Headlines tagged COMPANY, MACRO or MARKET; BREAKING for big ones. Stories about your holdings are highlighted.

12 Risk & leave
Composite risk score (LOW → HIGH) with current drawdown, and the paid leave left this career year.

03 THE SCARCEST RESOURCE

Time is money, literally.

The market is open 09:00–17:00, Monday to Friday. One working hour is one game hour, and each hour is simulated as twelve 5-minute ticks. Skipping never skips the simulation: every hour you jump over is played out in full.

CONTROL	TIME COST	WHAT HAPPENS
BUY / SELL STOCK	instant	Market order at the live price plus market impact and fees. Only while the market is open.
RESEARCH	1 h · 3 h	Quick look or deep dive. The clock runs while your analysts work; the report lands when it's done.
WORK 1 HOUR	+1 h	One market hour. Counts as hours worked. Before 09:00 it reads START DAY .
SKIP 2H / SKIP 4H	+2 h · +4 h	Stops at 17:00 so it never crosses into tomorrow by accident. A new risk warning interrupts the skip.
TO CLOSE	→ 17:00	Plays out the rest of the session, then shows the daily report.
NEXT BUSINESS DAY	→ 09:00	Finishes today, simulates the night (and any weekend) and opens the next session.
SKIP WEEKEND	Fri → Mon	Shown only on Fridays. You get a weekend report on Monday morning.
NEXT WEEK	→ Mon 09:00	Runs every remaining business day of the week in one go.
TAKE LEAVE	1–30 days	You are away; the market is not. See chapter 09.
LIVE MODE	1× · 2× · 4×	The clock advances on its own. Popups that need an answer pause it automatically.

BLOCKING DECISIONS

Risk warnings and the quarterly review **freeze the clock** until you answer them. You cannot skip past a breach.

INFORMATIONAL POPUPS

Daily reports, CEO check-ins and dialogues are just information. Close them, or they disappear the next time you advance time.

04 EXECUTION

Placing a trade

Choose a stock, enter a quantity (or tap a size chip such as ₹5 Cr or 10% NAV) and read the preview before you confirm. The preview tells you exactly what the fill will cost and warns you when an order would break a risk limit.

BUY

SELL

ORDER TICKET • MARKET ORDER

STOCK

AKSH — Akashdeep Technologies

₹3,971.81

+3.80% today

QUANTITY (SHARES)

You hold 3,000 @ ₹3,876.20

4000

₹1 Cr

₹5 Cr

5% NAV

10% NAV

MAX

Price (est. fill)	₹3,972.28	impact 0.01%	Quantity	4,000
Transaction value	₹1.59 Cr		Estimated fee	₹3,178

Cancel

CONFIRM BUY

The order ticket. Est. fill price with impact, transaction value, fee, cash after, and your position and sector weight after the trade. The note at the bottom is Compliance reminding you to document anything above 8% of the book.

Reading the ticket

- **Size chips:** ₹1 Cr, ₹5 Cr, 5% NAV, 10% NAV and MAX fill the quantity for you.
- **Price (est. fill)** already includes market impact, shown in orange.
- **Position / sector weight after:** check these against the 15% and 40% limits before you press confirm.
- **You hold** shows your existing quantity and average cost.
- BUY and SELL are tabs on the same ticket, so you can flip sides without closing it.

✓

TRADE EXECUTED

BUY 4,000 AKSH @ ₹3,972.28

₹1.59 Cr • fee ₹3,178

The confirmation: side, quantity, fill price, value and fee.

WHAT A FILL COSTS	ON ₹10 CR
Brokerage + exchange fee (0.02%, each side, min ₹20)	₹20,000
Market impact (grows with size, capped at 1.2%)	in the fill
Transaction tax on sells only (0.1%)	₹1.00 L
Round trip, excluding impact	≈ ₹1.4 L

How market impact works

Impact is proportional to your order size divided by the stock's hourly volume. Smaller companies are easier to move, and your Head Trader's execution skill trims it.

$$\text{impact} \approx 0.8\% \times (\text{order qty} \div \text{hourly volume}), \text{ max } 1.2\%$$

A ₹1.6 Cr order in a large IT name moves the price about 0.01%. A ₹10 Cr order in a small solar developer can cost 50x that. Churning a large book every day adds up quickly.

RULE OF THUMB

Split big orders over two or three hours on thin names, and avoid flipping a position you bought this morning. The 0.1% sell tax alone wipes out a week of target pace if you do it ten times.

05 INFORMATION HAS A PRICE

Research turns hours into an **edge**.

Every stock has a hidden **fair value** and a hidden **earnings quality**. Prices drift toward fair value, and results reward or punish the gap. Research gives you a noisy estimate of both. It's a strong hint, never a guarantee.

KABIR ANAND • SENIOR ANALYST

Quick look • 1 hour

- Fair-value estimate with a **wide** error band
- Momentum, institutional flows, balance sheet notes
- Results view if the company reports within 10 days

error $\sigma \approx 11\% \times (1.35 - \text{desk skill}) \rightarrow \approx 7\%$ today

MEERA IYER • RESEARCH DIRECTOR

Deep dive • 3 hours

- A much **tighter** fair-value estimate and higher confidence
- BEAT / IN LINE / MISS call on the next results
- **Red-flag scan** for hidden trouble already brewing

error $\sigma \approx 5\% \times (1.35 - \text{desk skill}) \rightarrow \approx 3\%$ today

Research is an estimate, not a guarantee. Price when written: ₹2,015.41.

INVESTMENT THESIS • DHAN

BULLISH NEUTRAL BEARISH

"Strong growth and improving fundamentals."

Theses are scored for decision quality at your quarterly review.

Record thesis

Research another

Buy DHAN

A finished deep dive with fair value, upside, confidence and a results view, and the thesis box below it.

How to read a report

Rating **BUY** if estimated upside > 7%, **SELL** if below -7%, otherwise HOLD.

Confidence 30–95%. Rises with analyst skill; deep dives add about 12 points.

Red flags A deep dive catches a pending problem (profit warning, probe, product failure) with odds of about **40% + 45% × desk skill**: roughly 3 in 4 with today's team. Desk skill blends your best researcher (60%) with the Meera/Kabir average (40%), so a strong hire lifts every report.

Notes Strong or weak momentum, heavy institutional buying or selling, high debt (>55%) and rich valuation are called out.

RECORD A THESIS

After any report, write down **BULLISH**, **BEARISH** or **NEUTRAL** with one line of reasoning. A thesis counts as right if the stock later moves more than 1% your way. The board scores your accuracy, and a thesis or recent research also counts as documentation for Compliance.

06 FIRM POLICY • MEDIUM PROFILE

Risk is part of the score.

Apex Capital has four hard lines. Cross one of the first three and the Chief Risk Officer stops the clock until you respond. Cross the fourth and the board ends your career on the spot.

RISK WARNING
 Firm risk policy breached

VYOMIKA SOFTWARE POSITION
19.0%

FIRM POLICY
15%

Farhan Qureshi CHIEF RISK OFFICER
 "This is outside policy. Bring it back in line, or make the case for an exception."

Reduce plan: sell 23,640 VYMK

REDUCE EXPOSURE
 Sell down to policy now

REQUEST EXCEPTION
 Risk Manager decides • 7 days

IGNORE
 Goes on your record

A blocking risk warning. The CRO shows the breach, the policy, his comment and a ready-made reduce plan.

Three ways to answer

Reduce exposure

Sells down to just inside policy (it also works in the 17:00 closing auction). Builds the Risk Officer's trust and earns a little reputation. Almost always the right call.

Request exception

The Risk Officer decides. Odds rise with your reputation and his trust, and fall with the size of the breach and each exception already granted. If granted, it lasts **7 days**. Not available for drawdown.

Ignore

-3 reputation now, a further daily cost for about a week, and it counts against you at review. Ignore more than one breach and you can't be promoted that quarter.

COMPLIANCE

Buying more than **8% of the book** with no research or thesis on file in the past week draws a documentation note. The first one is free; after that each one is a **strike** (at most one per stock per week). More than two strikes blocks promotion.

YOUR RISK SCORE

The sidebar gauge blends stock concentration (25%), sector concentration (25%), drawdown (30%) and volatility (20%), plus 10 points per open breach. **LOW** < 30 • **MEDIUM** < 55 • **HIGH** < 75 • **CRITICAL**. The CRO messages you **before** you hit a limit.

WHY "A NOTCH INSIDE" MATTERS • WORKED EXAMPLE

14%

A ₹14 Cr position in a ₹100 Cr book, under the 15% line.

+8.4%

The stock rallies while the rest of the book is flat. That move alone is enough...

15.0%

...to push it over the line. Winners breach by themselves; size at 12% and you have room for a +29% run.

News moves prices, and some stories **run for days.**

Every headline comes from a real event inside the simulation: earnings, product launches, regulators, rate decisions, oil shocks, fund flows. Big stories unfold over several days, and how they branch depends on the company, especially its debt.

EXAMPLE CHAIN • ACQUISITION

Other chains: regulator probe → cleared or fined • plant shutdown → restart or extended • CEO exit → respected successor or doubts. Holding through the chain is your call.

What to watch

The calendar	CPI, GDP and the central-bank decision are listed with the market consensus and your economist's forecast. The surprise against consensus is what moves prices.
Results season	Every company reports once a quarter. Expensive stocks fall harder on a miss.
Overnight	After-hours news and global markets (US TECH 100, US 500) show up as gaps at the 09:00 open.
Macro links	Rate shocks hit Infrastructure, Finance and Autos hardest; oil shocks lift Energy and hurt Logistics and Autos; a weak rupee helps Technology and Pharma.

CEO check-ins land around days 30, 60 and 85. Their tone follows your pace against the target.

THE HIDDEN MARKET REGIME • YOU'RE NEVER TOLD WHICH ONE YOU'RE IN

BULL

Steady drift up, calm. 8–30 days.

STABLE

Low volatility, mild drift. 8–30 days.

VOLATILE

Choppy, more events. 4–14 days.

BEAR

Grinding lower. 5–18 days.

CRISIS

Sharp falls, VOL spikes. 2–7 days.

Read it from breadth, **BHARAT VOL** and Dr. Krishnan's Monday macro brief. Crises are short: they usually hand over to a volatile or bear phase, not straight to a bull market.

08 TIME PRESSURE

Block deals: a discount with a **deadline**.

A few times a week a seller offers a large block below the market, and the offer expires within hours. Most sellers just want out. About one in three knows bad news is coming.

DISCOUNT

2.5–6%

below the live price

BLOCK SIZE

₹3–9 Cr

3–9% of a ₹100 Cr book

WINDOW

2–3 h

never open past 16:00

INFORMED SELLERS

≈ 30%

bad news lands in 2–6 days

OPTION A

Take it now

Lock in the discount immediately. If the seller is an insurer rebalancing, you just bought ₹5 Cr of stock 3.5% cheap: an instant ₹17 L, about one full session of target pace in a single click.

Risk: the seller knew about a profit warning, regulatory probe or product failure due within days.

OPTION B

Research first

A 3-hour deep dive can flag an "unusually eager" seller. With today's research desk the scan spots an informed seller roughly **70%** of the time, and it also catches the hidden event itself.

Risk: the offer expires while your analysts are still working. A 2-hour window is too short for a deep dive.

THE TRADE-OFF IS THE GAME

"I have three hours before this expires. Do I buy now, or spend the three hours finding out?"

Reading the offer

- **The discount itself is a tell.** Uninformed sellers ask 2.5–5%; informed ones 3.5–6%. Anything **above 5%** comes from a seller who knows something.
- **Check the window.** Only a 3-hour offer leaves room for a deep dive. With 2 hours, a quick look is all you can afford.
- **Check the calendar.** Results due within a week plus a big discount is the classic informed-seller setup.
- **Check the size.** The block adds to your position; a ₹9 Cr block on top of an existing holding can breach 15% on its own.

Where offers come from

Rohan D'Souza, your Head Trader, brings offers to your inbox and marks them **HIGH**. They also appear in the Upcoming panel with a countdown. Sellers include promoter-group entities, exiting private-equity funds, foreign portfolio investors, family offices and insurers rebalancing their books.

At most two offers are open at once, and none are made in the last two hours of a session.

09 THE MARKET DOESN'T STOP

Weekends & paid leave

You get **60 paid leave days** per career year (360 game days); weekends don't count against them. Leave taken at the 09:00 open starts today. Otherwise the rest of the day passes and leave starts tomorrow.

57 days

Rathmotion Motors product launch falls flat

No dedicated portfolio manager at your level — positions were left untouched.

BACK TO THE DESK →

Coming back from leave: days away, market move, portfolio change, and what your team did.

LEVEL 1

Nobody minds the book

While you're away, prices, events and news carry on, and your positions are left untouched. No stop-losses, no trims. A two-week holiday through results season is a gamble.

LEVEL 2 AND ABOVE

A delegate runs the desk

A junior analyst (later a portfolio manager, then a team) runs **stop-losses at -10%** and trims policy breaches for you. Breaches that happen while you're away wait for you when you return.

NO LEAVE PENALTY

You're not penalised just for taking leave. Only what happens to the book counts.

GOOD TIME TO GO

Low risk score, no open breaches, no results or CPI on the calendar for your holdings.

BAD TIME TO GO

The week before day 90, mid-way through a story chain, or with a position near 15%.

HOW THE CLOCK HANDLES LEAVE		
YOU CLICK TAKE LEAVE AT...	LEAVE STARTS	DAYS CHARGED
09:00 on a business day	immediately	business days only
any later time	next business day; today is played out to 17:00	business days only
Friday afternoon, 3 days	Monday 09:00	Mon–Wed; the weekend is free

10 THE PEOPLE AROUND YOU

Your team, and what their skills **actually** do.

Each character has skills with real effects in the simulation, plus **trust**, **stress** and **form** that react to your choices. Ignore the Risk Officer often enough and he stops approving exceptions.

CHIEF EXECUTIVE OFFICER

Vikram Sethi

Sets the target and judges your quarter. Check-ins around days 30, 60 and 85. Loses trust when you fall behind pace.

LEADERSHIP 95 • PATIENCE 45

CHIEF FINANCIAL OFFICER

Ananya Rao

Signs off the numbers at review: return against target and benchmark, and the fees you paid.

FINANCE 88 • PATIENCE 70

CHIEF RISK OFFICER

Farhan Qureshi

Raises risk warnings and decides exceptions. Warns you early when you near a limit. Remembers every ignored breach.

RISK 66 • NEGOTIATION 57

RESEARCH DIRECTOR

Meera Iyer

Runs deep dives. Her skill sets fair-value accuracy and the odds of catching a red flag. Sends a weekly idea on Wednesdays.

RESEARCH 76 • VALUATION 68

SENIOR ANALYST

Kabir Anand

Handles quick looks. Fast and quantitative, but his estimates are wider than a deep dive. Screens for undervalued names.

RESEARCH 73 • QUANT 77

HEAD TRADER

Rohan D'Souza

His execution skill cuts market impact on large orders. Brings you block-deal offers.

EXECUTION 66 • MARKET KNOWLEDGE 72

CHIEF ECONOMIST

Dr. Leela Krishnan

Beats the consensus on CPI and GDP forecasts. Her Monday brief hints at the hidden market regime.

MACRO 73 • FORECASTING 69

COMPLIANCE OFFICER

Suresh Pillai

Wants research on file before any position above 8% of the book. Strikes cost reputation.

COMPLIANCE 74 • NEGOTIATION 52

HR MANAGER

Nandini Bose

Handles leave and headcount. From Level 2 she brings you candidates to hire.

PEOPLE 86 • NEGOTIATION 62

TRUST

Rises when you follow advice that works, falls when you overrule it. Low CRO trust means exceptions get refused.

STRESS

Rises with drawdowns and open breaches (fastest for the CRO and CFO); relaxes when the book is calm.

FORM

Slides while stress stays high and recovers when it falls. A stressed team means your book needs attention.

RECRUITMENT

Unlocks at Level 2. A strong research hire lifts the whole desk's accuracy.

Skill values shown are a typical start; they vary slightly with each new career. See them all on the Team page.

11 DAY 90 • THE BOARD ROOM

The quarterly review judges more than **profit**.

When the quarter ends, the clock stops and the CEO, CFO and Chief Risk Officer each give their verdict. Hitting the number with a messy risk record gets you kept, not promoted.

A narrow miss: ₹100.11 Cr against a ₹112 Cr target, but well ahead of a falling benchmark. The board's verdict is a WARNING. The review also names your best and worst decision of the quarter.

Five possible outcomes

PROMOTED

Target hit with clean conduct. New title, more capital.
+8 rep • +800 XP

TARGET ACHIEVED

Number hit, conduct not clean. You keep the job.
+4 rep • +500 XP

WARNING

Missed, but overall score ≥ 40. One step up the ladder.
-4 rep • +150 XP

FAILED

Overall below 40. One step, and a heavier hit.
-10 rep • +50 XP

TERMINATED

Warnings exhausted, 20% drawdown, or reputation below 20.
Game over

THE WARNING LADDER

CLEAN RECORD

WARNING

FINAL WARNING

TERMINATED

A WARNING or FAILED review moves you one step right. A third step ends your career. A PROMOTED or TARGET ACHIEVED review takes you one step back. Breaching the 10% drawdown mid-quarter earns an immediate formal warning, and if your reputation drops below 30 the CEO warns you before it's too late.

12 UNDER THE HOOD

How you're scored.

The board turns your quarter into five scores from 0 to 100, then weights them into one overall number. The overall number decides between WARNING and FAILED; promotion needs every requirement on the checklist.

SCORE (EACH 0-100)	WEIGHT
Return vs target $50 + 50 \times (\text{return} \div \text{target})$ Flat = 50. Exactly on target = 100.	40%
Risk conduct $100 - 60 \times (\text{max DD} \div \text{limit}) - 12 \times \text{ignored} - 8 \times \text{strikes}$ A drawdown right at the limit alone costs 60 points.	25%
Reputation $\text{your reputation at review}$	15%
Alpha vs BHARAT 50 $50 + 500 \times (\text{return} - \text{benchmark})$ Beat the index by 10 points and this maxes out.	12%
Decision quality $\% \text{ of theses proved right} \cdot 50 \text{ if none}$	8%

TO BE PROMOTED YOU NEED ALL OF THESE

- Return of at least **+12%**
- Max drawdown within **10%**
- Reputation of **55** or more
- No more than **one** ignored risk breach
- No more than **two** compliance strikes

INSTANT TERMINATION

- Drawdown of **20%** or more at any point
- Reputation below **20** at review
- A third step on the warning ladder

Reputation also moves after every review: the outcome's fixed amount plus up to **±4** for how you did against the benchmark.

Worked example: a good quarter that still gets a warning

YOUR QUARTER	SCORE	WORKING	POINTS
Return	+9.0%	$50 + 50 \times 9/12$	$87.5 \times 0.40 = 35.0$
BHARAT 50	+2.0%	$100 - 60 \times 0.6 - 8$	$56.0 \times 0.25 = 14.0$
Max drawdown	6.0%	62	$62.0 \times 0.15 = 9.3$
Ignored breaches · strikes	0 · 1	$50 + 500 \times 0.07$	$85.0 \times 0.12 = 10.2$
Reputation	62	3 / 5	$60.0 \times 0.08 = 4.8$
Theses right	3 of 5	Overall	73.3

VERDICT: WARNING

An overall score of 73 is strong, but the target was missed, so the best available outcome is WARNING. The overall score only decides between WARNING (≥ 40) and FAILED. **Only the target opens the top two outcomes.** Three more points of return would have made this a promotion.

13 PROGRESSION

The career ladder

Each promotion starts a new quarter with extra capital, a new target and a **tighter** drawdown limit. Level 1 is fully built; higher levels reuse the same loop and add delegation and hiring. More instruments are still to come.

Capital shown is what each promotion adds to your book. Target is the quarterly return; DD is the drawdown limit at that level.

LEVEL	UNLOCKS	MINDS THE BOOK ON LEAVE	XP
1 · Head of Investments	Equities, buy / sell, portfolio, research desk, block deals	nobody	0
2 · Investment Director	Sector allocation, research team hiring, junior analyst delegation	junior analyst	1,000
3 · Senior Inv. Director	Bonds, IPOs, hedging, advanced risk · planned	portfolio manager	2,500
4 · Portfolio Director	M&A, multiple portfolios, institutional clients · planned	investment team	4,500
5 · Chief Inv. Officer	Investment teams, large capital, board decisions · planned	investment team	7,000
6 · Managing Director	Multiple divisions, competitor firms, large deals · planned	division	10,000
7 · Chief Executive Officer	Run the entire investment organisation	division	14,000

EARNING XP

Research 15 / 35 · thesis 5 · realised profit 1 per ₹10 L (max 200 a trade) · target milestones at 25/50/75/90% give 60 each, and 100% gives 250 + 3 reputation · reviews up to 800.

THE SQUEEZE

The target falls from 12% to 8% as you climb, but the drawdown limit falls from 10% to 7% and the book grows 90×. Higher levels reward consistency over boldness.

14 WHAT ACTUALLY WORKS

Playbook

We had four bot players, each with a different style, play the same 16 markets for a full quarter. No style wins outright. More risk means a better shot at the target and a bigger chance of being fired.

The balanced bot was the only style that hit the target without ever being fired. A thoughtful human, who reads the news and researches before sizing up, should do considerably better than any of them.

01 Deploy early, not all at once

Sitting in cash guarantees a miss. Build 8–12 positions over the first week and keep 10–20% cash for block deals and dips.

02 Research before you size up

A deep dive on anything above 8% of the book keeps Compliance quiet and gives you a real fair-value anchor.

03 Stay a notch inside the limits

Aim for 12% per stock and 30–35% per sector. Normal price drift will push a 14% position over 15% on a good day.

04 Mind the calendar

Don't sit on a big position through results you haven't researched. Check the economist's number before CPI and the rate decision.

05 Beat the benchmark, not just zero

Reputation drifts with your daily return against BHARAT 50. In a falling market, holding up well counts.

06 Take leave when the book is calm

Low risk score, no open breaches, nothing big on the calendar. You come back rested, not wrecked.

07 Answer the CRO with REDUCE

Unless you have a written thesis and a reason, reducing builds trust you'll want later for the exception that really matters.

08 Write theses, even short ones

They're 8% of the review, they count as compliance documentation, and they force you to think before you buy.

15 OPENING MOVES

Your first week, day by day.

A safe, balanced opening that gets you invested, keeps Compliance happy and leaves room for opportunities. Adapt it to what the news gives you.

DAY 1 • MON

≈ 30%
invested

Read, then build the core

Read the inbox: the CRO's policy note, Dr. Krishnan's macro brief, Meera's welcome. Look at the calendar for the next two weeks. Buy 4–5 starter positions of 5–7% each in different sectors, favouring low-volatility names (FMCG, Healthcare, a large bank).

DAY 2 • TUE

≈ 50%
invested

Research your two biggest ideas

Run a deep dive on the two stocks you'd most like to hold at 10%+. Record a thesis for each. If the fair value backs you up, top them up to 9–11%. Use quick looks to screen two or three more names.

DAY 3 • WED

≈ 65%
invested

Act on Meera's weekly idea

Her Wednesday idea is a good starting point. Add 2–3 more positions from it and your quick looks. Check your sector weights: nothing above 30% yet.

DAY 4 • THU

≈ 75%
invested

Watch for a block deal

By now you've probably seen one. If the discount is under 5%, the window is 3 hours and nothing is on the calendar, research it, then take it. Otherwise let it go.

DAY 5 • FRI

80–90%
invested

Tidy up before the weekend

Trim anything above 13%, cut any position that's down more than 8% without a thesis, and keep 10–20% cash. Then SKIP WEEKEND and read Monday's weekend report.

A sample balanced book

SECTOR	EXAMPLE NAMES	WEIGHT
Banking • Finance	GMBK, SHRF	20%
Technology	AKSH, TRGM	18%
FMCG	KESR, NITY	14%
Healthcare	DHAN, AROG	12%
Auto • Infra • Defence	RATH, VJRA, GRDA	20%
Cash	for block deals and dips	16%

An illustration of diversification, not a recommendation: the hidden fair values differ every career.

A daily routine

- **09:00** Read the overnight gap, the inbox and anything tagged HOLDING.
- **Morning** Trade on anything researched; start one research job.
- **Midday** SKIP 2H; deal with block offers and results.
- **Afternoon** Check weights; reduce anything near a limit.
- **17:00 TO CLOSE**, read the daily report, NEXT BUSINESS DAY.

SAVE BEFORE A BIG BET

Use the save icon in the top bar for a named save before a risky trade, so you can load it later and try the other path.

A APPENDIX

The listed universe

Twenty fictional companies trade on the simulated Dalal Street Exchange. **Vol** is the typical daily move; **beta** is how hard a stock swings with the market; **valuation** runs from cheap (0) to expensive (1), and expensive stocks fall harder on a miss.

SYMBOL	COMPANY	SECTOR	VOL	BETA	DEBT	VAL.	PROFILE
AKSH	Akashdeep Technologies	Technology	2.1%	1.30	low	0.72	IT services, cloud consulting for banks
TRGM	Tarangam Systems	Technology	1.9%	1.20	low	0.62	Networking hardware, managed security
VYMK	Vyomika Software	Technology	2.6%	1.45	low	0.84	High-growth payments & analytics SaaS
GMBK	Ganga Meridian Bank	Banking	1.6%	1.10	high	0.48	Large private bank, strong retail arm
KVTB	Kaveri Trust Bank	Banking	1.9%	1.20	high	0.30	Cheap mid-sized lender, patchy assets
SHRF	Shreyas Capital Finance	Finance	2.1%	1.15	high	0.55	Consumer and SME lending NBFC
AGNI	Agnivayu Energy	Energy	2.2%	0.85	mid	0.28	Oil refining and fuel retail
PRKS	Prakashpath Solar	Energy	3.0%	1.10	high	0.80	Solar developer; policy-sensitive
DHAN	Dhanvantari Pharma	Healthcare	1.8%	0.70	low	0.58	Generics exporter; regulator inspections
AROG	Arogyam Healthcare	Healthcare	1.5%	0.60	low	0.52	Hospital chain, tier-1 and tier-2 cities
RATH	Rathmotion Motors	Automobile	2.0%	1.20	mid	0.44	Passenger cars, moving to EVs
CHKR	Chakra Autoworks	Automobile	1.8%	1.05	mid	0.36	Two-wheelers and auto components
KESR	Kesarika Consumer	FMCG	1.1%	0.55	low	0.68	Packaged foods, personal care
NITY	Nityam Goods	FMCG	1.2%	0.55	low	0.55	Household goods, rural distribution
BZRB	Bazaarbeat Retail	FMCG	2.2%	0.95	low	0.74	Fast-growing omnichannel grocer
DRVN	Doorvani Telecom	Telecom	1.7%	0.85	high	0.40	Mobile and fibre; tariff-sensitive
SETU	Setubandh Infrastructure	Infrastructure	1.9%	1.05	mid	0.38	Roads, bridges, metro construction
VJRA	Vajrashila Industries	Infrastructure	1.7%	0.95	mid	0.34	Cement and building materials
GRDA	Garudastra Defence	Defence	2.0%	0.75	low	0.70	Radar, avionics, naval systems
PTHK	Pathik Logistics	Logistics	1.8%	0.95	mid	0.46	Freight, warehousing, last-mile

CALMEST

KESR and NITY move about 1.1% a day with a beta of 0.55: the anchors of a defensive book.

WILDEST

PRKS (3.0%) and VYMK (2.6%) are expensive and event-sensitive. Size them small.

CHEAPEST

AGNI (0.28) and KVTB (0.30) are priced low. Research will tell you if they are cheap for a reason.

B APPENDIX

Sectors, macro & regimes.

How each sector reacts to the four big macro forces, and how the hidden market regime behaves. Positive numbers mean the sector rises when that force rises.

SECTOR	RATES ↑	OIL ↑	GLOBAL RISK-ON	WEAK RUPEE	MARKET LINK
Technology	-0.6	-0.1	+1.0	+0.6	0.70
Banking	+0.3	-0.2	+0.5	-0.2	0.75
Finance	-0.8	-0.2	+0.5	-0.2	0.70
Energy	-0.2	+1.0	+0.4	-0.1	0.50
Healthcare	-0.2	-0.1	+0.3	+0.5	0.40
Automobile	-0.7	-0.7	+0.4	-0.3	0.65
FMCG	-0.3	-0.5	+0.1	-0.2	0.40
Telecom	-0.5	-0.1	+0.2	-0.1	0.45
Infrastructure	-0.9	-0.4	+0.3	-0.2	0.60
Defence	-0.2	-0.1	+0.1	0.0	0.40
Logistics	-0.4	-0.8	+0.4	-0.1	0.55

"Market link" is how strongly the sector co-moves with the broad market (0–1). Values of ± 0.5 or more are highlighted.

The five regimes

REGIME	DAILY DRIFT	DAILY VOL	EVENTS	LASTS	USUALLY TURNS INTO
BULL	+0.09%	0.62%	0.9×	8–30 d	Stable (60%), Volatile (30%)
STABLE	+0.03%	0.55%	0.8×	8–30 d	Bull (45%), Volatile (35%)
VOLATILE	-0.01%	1.05%	1.3×	4–14 d	Stable (35%), Bear (32%)
BEAR	-0.07%	0.90%	1.1×	5–18 d	Stable (40%), Volatile (35%)
CRISIS	-0.30%	1.80%	1.8×	2–7 d	Volatile (50%), Bear (35%)

A career usually opens in Stable (40%) or Bull (30%) and never in Crisis. Figures are for the broad market factor; individual stocks add their own sector and company noise.

RATE DECISION

A hawkish surprise hurts Infrastructure, Finance and Autos; banks are the only sector that benefits.

OIL SHOCK

Energy is the hedge. Logistics, Autos and FMCG take the hit through fuel and input costs.

GLOBAL SELL-OFF

Technology swings hardest with US TECH 100. Healthcare and Defence barely notice.

C KEEP THIS HANDY

Quick reference

Start the game

```
# Option 1 · Docker + PostgreSQL
# (start Docker Desktop first)
docker compose up --build -d
# open http://localhost:5173
docker compose down # -v wipes saves

# Option 2 · No Docker (SQLite)
cd backend
.venv/Scripts/activate
uvicorn app.main:app --port 8000
# second terminal
cd frontend
npm run dev
# open http://localhost:5173
```

Your career autosaves after every action. Use the save icon in the top bar for named saves you can load later, and the gear icon to restart.

Numbers to remember

09:00–17:00	Market hours, Mon–Fri
15% · 40%	Single-stock and sector limits
10% · 20%	Drawdown warning · termination
8% of NAV	Above this, document with research
0.02% · 0.1%	Fees · tax on sells
1 h · 3 h	Quick look · deep dive
2.5–6%	Block deal discount (>5% = informed)
7 days	Life of a granted exception
60 days	Paid leave per career year
55 · 20	Reputation to promote · to survive
₹1 L · ₹1 Cr	₹1,00,000 · ₹1,00,00,000

Simulated tickers

BHARAT 50	Broad benchmark of all 20 listed companies; your review is measured against it
DALAL 30	The 12 largest companies by market cap
BHARAT BANK	Banking and finance names
BHARAT VOL	Fear gauge (starts near 14.5); spikes when the market falls
US TECH 100 · US 500	Global markets that trade overnight and drive the morning gap
USD/INR · GOLD	Currency and safe-haven signals

Every page in the terminal

Performance

Equity curve vs benchmark, sector attribution.

D APPENDIX

Glossary

Alpha	Your return minus the BHARAT 50 return over the same period.
Block deal	A large, discounted, time-limited offer of shares from a single seller.
Breach	A position, sector or drawdown beyond firm policy. Triggers a blocking risk warning.
Consensus	What the market expects from a data release. Prices react to the surprise against it.
Drawdown	The percentage fall of NAV from its highest point this quarter.
Exception	Seven days of permission from the CRO to stay outside a stock or sector limit.
Fair value	The hidden "true" price each stock drifts toward. Research estimates it.
Impact	How much your own order moves the price against you.
NAV	Net asset value: your cash plus the market value of every holding.
Red flag	A hidden problem a deep dive can uncover before it becomes news.
Regime	The hidden market phase: bull, stable, volatile, bear or crisis.
Reputation	Your 0–100 standing with the board. Drifts with alpha and conduct.
Strike	A compliance mark for an undocumented buy above 8% of the book.
Thesis	Your written bullish, bearish or neutral call on a stock, scored at review.

**"Welcome to Apex Capital. Your first assignment is simple.
Beat the quarterly target."**

Vikram Sethi, Chief Executive Officer

Investment Banker Mode is a simulation game. All companies, indices, people and events are fictional; resemblance to real entities is coincidental. Nothing here is market data or financial advice. Screenshots are from live game sessions.
